

VIRTUAL PRIVATE CLOUD SEEWEB

The exclusive private environment for your data and work

Virtual Private Cloud: what is it?

It is a deployment model that lies between private and public cloud. Provided by a public cloud provider, it is offered to the client as a dedicated portion of infrastructure for **exclusive use**.

Main Use Cases

- Managing large volumes of workloads in the enterprise
- Extending your on-premise datacenter
- Building a Disaster Recovery environment
- Hosting mission-critical applications
- Maximizing resource utilization
- Ensuring compliance with specific security standards and legal policies.

The Seeweb VPC

The perfect private cloud for businesses seeking a trusted and experienced partner. Our data centers, strategically located across Europe, enable us to offer:

- robust infrastructure stability;
- a reliable and redundant network;
- unlimited provisioning opportunities.

This resilient and flexible technology forms the foundation of a Virtual Private Cloud with a **baseline configuration already exceeding market standards**:

- two computational nodes, each equipped with dual latest-generation Intel processors and RAM options ranging from 128GB to 512GB;
- a fully redundant SAN (Storage Area Network);
- all-Flash Storage with latency below one microsecond;
- the ability to choose the hypervisor that best suits your needs: **Proxmox VE Standard**, enabling the setup of **high availability (HA)**, or **VMware Cloud Foundation**, ideal for managing complex virtualized environments with maximum flexibility;
- a security appliance to enable IPsec VPN and define access and security policies, creating DMZ and bastion host.

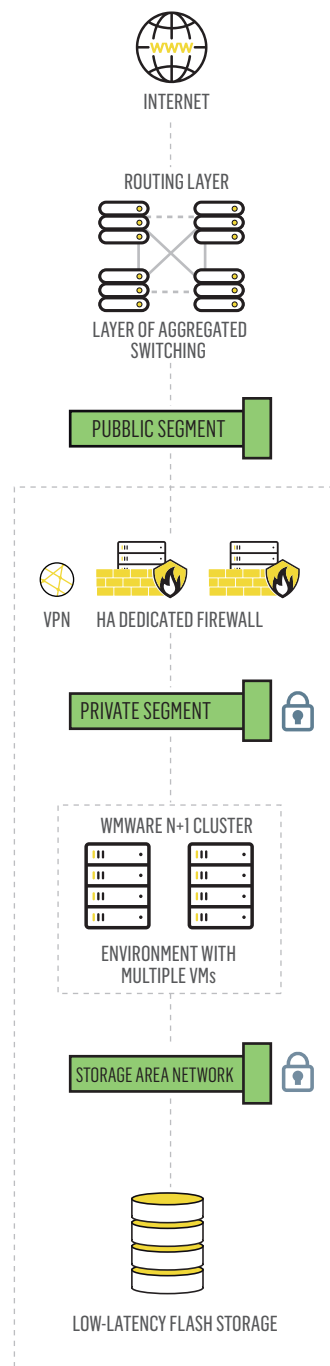

Technology and People

Start with the robust foundation of the Seeweb VPC, then tailor it to your needs by choosing:

- amount of storage to allocate;
- type of licenses to pair with the servers you plan to install;
- amount of space required for backups;
- level of support to associate with the service;
- volume of data to protect using our Cloud Data Protection, a backup and disaster recovery solution powered by Veeam.

Presales Support

Designing your Virtual Private Cloud infrastructure can be incredibly simple with the help of **professional presales support**. Tell us your requirements, the SLA you need, and the investment you plan to make: our experts are ready to create a tailor-made solution for you!
